

UTKARSH BATHAM

Vadodara, India • +91 79847 64001 • Remote-Ready • udaydeepak1928@gmail.com • github.com/UTKARSH698 • linkedin.com/in/utkarsh-batham-531913247

SUMMARY

Cloud & DevOps Engineer with hands-on experience building production-grade AWS infrastructure, serverless pipelines, and security automation systems. Proficient in Terraform, Kubernetes, Docker, and GitHub Actions CI/CD. Proven ability to design fault-tolerant distributed systems from scratch. Available immediately for full-time remote roles.

EXPERIENCE

Cloud Engineering Intern — TEJASKP AI SOFTWARE

Jan 2026 – Jul 2026

Remote-capable • AWS • Terraform • Kubernetes • 6 months

- Designed and managed AWS cloud infrastructure (EC2, VPC, IAM, S3, CloudWatch) in a production environment, ensuring high availability and security compliance.
- Provisioned infrastructure as code using Terraform modules — reduced manual setup time and enabled reproducible multi-environment deployments.
- Managed containerized workloads with Docker and Kubernetes; configured deployments, services, and resource limits across environments.
- Implemented IAM least-privilege policies and security group rules; contributed to internal cloud security posture reviews.
- Built and maintained GitHub Actions CI/CD pipelines for automated testing, Docker image builds, and deployment to cloud environments.
- Monitored infrastructure health using CloudWatch dashboards and alarms; set up structured logging and incident alerting.

PROJECTS

CloudFlow — Distributed SAGA Order Processing System —

Python • AWS Step Functions • Lambda • DynamoDB • SQS • CDK • LocalStack • X-Ray |
github.com/UTKARSH698/CloudFlow

- Built a production-grade serverless order-processing system using the SAGA choreography pattern — coordinating reservation, payment, and confirmation across isolated Lambda functions without two-phase commit.
- Implemented automatic compensation on failure, idempotent handlers, and a circuit-breaker pattern to prevent cascade failures across microservices.
- Achieved **1,100+ req/min** at 50 concurrent threads with P99 latency < 120 ms (LocalStack); 30+ unit, integration, and failure-path tests.

CloudPulse — Real-Time Analytics Platform (Lambda Architecture) —

Python • Kinesis • S3 • Athena • DynamoDB • Terraform • React • Cognito |
github.com/UTKARSH698/Cloud_Pulse

- Designed a dual-path Lambda Architecture: Kinesis speed layer for real-time per-minute counters and SQS → S3 batch layer for historical SQL queries via Athena.
- Partitioned S3 data lake with AWS Glue; DynamoDB counters with 24-hour TTL auto-expiry; entire stack provisioned via Terraform and runs within AWS Free Tier.
- Secured API access using Cognito user pools with JWT-based authentication; React dashboard for real-time metric visualization.

CSPM — Cloud Security Posture Management —

Python • Lambda • EventBridge • SNS • S3 • CloudWatch • Terraform • GitHub Actions |
github.com/UTKARSH698/CSPM

- Built an automated security scanning system checking AWS environments against CIS Benchmark v1.5 (IAM, S3, EC2, CloudTrail) on an hourly EventBridge schedule.
- Critical findings trigger SNS alerts in **< 5 seconds**; safe-to-remediate violations are auto-corrected; all findings logged to S3 for audit trail.
- CI/CD pipeline via GitHub Actions auto-deploys scanner updates; Terraform manages all infrastructure with zero manual provisioning.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (Lambda, EC2, VPC, IAM, S3, EKS, ECS, SQS, SNS, Kinesis, DynamoDB, Athena, CloudWatch, EventBridge, X-Ray, Glue, Cognito)

laC & DevOps: Terraform, AWS CDK, Docker, Kubernetes (EKS), Helm, GitHub Actions, CI/CD, LocalStack, Render, Railway

Languages: Python 3.11+, TypeScript, JavaScript, SQL, Bash

Distributed Systems: SAGA Pattern, Circuit Breakers, Event Sourcing, Idempotency, Lambda Architecture, Eventual Consistency, Microservices

Security: CIS Benchmark, IAM Least Privilege, CSPM, Zero-Trust Principles, Security Group Hardening, SNS Alerting

Monitoring & Testing: CloudWatch, X-Ray Tracing, Structured Logging, Prometheus/Grafana (familiar), pytest, moto, Load Testing

EDUCATION

B.Tech — Computer Science (Cloud Technology & Information Security) — ITM Vocational University

2022 – 2026

CGPA: 9.35 / 10 · Vadodara, Gujarat, India
